The Nintendo Switch is not only incredibly successful, the little hybrid console from Nintendo also happens to be one of the best and most versatile gaming platforms you can buy today. As a standalone device, it's already worth every penny, but you can get more out of your Switch by paying for a Nintendo Switch Online service subscription. Online game Main Value offer Nintendo Switch Online service subscription, of course, is the opportunity to play games online. Without subscribing you will only be playing just playing single player mode and games that are only online in nature, you will not be able to play at all! Cloud Game Saves Switch is a portable system that makes it much more likely that you could lose or stop it for a while and on. Digital games can always be downloaded again and your Switch cartridges are unlikely to break, but your game progress is indispensable. If you subscribe to the Nintendo Switch Online service, you can create cloud backups of your saved games each time you connect to the Internet. Now is a big warning! The game in question is to support cloud saves to use this feature, so make sure the games you care about lists cloud saving feature. Voice Chat Features Voice Chat is a pretty standard feature of online gaming these days. All you have to do is connect the headset to your computer or console, and you also can have rude kids screaming in your ear within minutes. Not so nintendo switch. Inexplicably the console does not support headphones at all. You can use a regular set of headphones, but USB-C, Bluetooth and wired headphones are a no-no. If you pay a subscription fee, Nintendo is a solution for voice chat. It requires a Nintendo app and a smartphone that allows you to chat with other players. Honestly, it's a pretty clunky way to get voice chat in games. You could also use an alternative, such as a strife site, which can be used for free. Access to the Classic Games Nintendo Switch is unfortunately lacking in any kind of virtual console, as has been the case with past Nintendo machines. For older Nintendo consoles, you could buy classic NES, SNES, N64 and other classic games to play them on newer hardware. The only way to play classic Nintendo games, except with re-release, is to subscribe to the online service because it gives you access to Switch Online NES and SNES applications. In these apps you'll find classic game collections from the first two Nintendo home consoles. You don't get to choose which names are included, but Nintendo periodically adds more games at no extra cost to you. In addition, the titles that are included include some properly beloved names. On the NES side of things, you'll find Mario Bros. 1-3, Legend of Zelda and other heavy hitters from nintendo catalog. The SSS selection has names like Zelda: Link to the Past, Mario Kart and Star Fox 2. The name, which is only available on VNS Classic, has never been released to the original hardware. Given what Nintendo has paid for these names in the past and the fact that you had to re-purchase them with each new console, subscription-based library games are incredibly good value for money. The deal will also only be better with time as a new name and (maybe) new systems are added. Exclusive Controllers Being a Nintendo Online subscriber gives you access to special official retro controllers that can only be ordered by those who belong to the club. These controllers are meant to give you a more authentic experience when playing classic games. To be honest, the standard Switch Joy Cons and Pro controllers work just fine for these classic games. Also, you can buy some very nice third-party classic controllers from companies like 8BitDo, which is 100% Switch compatible, costs less and works great. Not really a selling point service unless you are a particularly hardcore Nintendo fan. Game Coupons Although being a Nintendo Switch Online service member does not give you access to special discounts in the same way that, say, Playstation Plus does, it can save you money. Nintendo has introduced digital coupons to select a list of games. You buy a coupon at a certain price, and then you can have two games from the list. You can also request one game now and then use another coupon when another supported game is released. As long as it is within one year of purchase. How much money it saves you varies because not all of these games have the same retail price. However, you usually save about \$20 on every pair of games you buy. Just pay attention to the normal price, coupons for cheaper games. What does it cost? Like most online services, the longer the period for which you pay in advance, the less it all ultimately works like. If you want to pay from month to month, you have to stump up to \$3.99 at the time of writing. Three months will cost you \$7.99 and the whole year will cost about \$19.99. Going for an annual plan will save you nearly twenty-eight dollars. So clearly that is best to go about. Don't forget there's a 7 day free trial you can sign up for before you draw yourself and four bucks isn't too much for another four weeks if you just can't decide whether it's you or not. If you have more than one switch in the house with multiple players, the family plan is an absolutely fantastic deal. For \$34.99 per month, you can cover eight Nintendo accounts a year. You can figure out how to make the best of that yourself, but that works to miniscule on the account of 4.30 \$par year. What you don't need to Switch Online Not every game requires a Switch Online service subscription to use online multiplayer services. Free-to-play hits like Fortnite and Paladins can be downloaded and played on any Switch with an Internet connection, without having to pay anything at all for Nintendo. Games that do not require a Nintendo Online subscription are usually clearly said in the eShop description or on their official website. Obviously, you also don't need a subscription to sign up for Nintendo eShop and buy games digitally. This is just a multiplayer aspect of most games that require this subscription. You don't need Nintendo Online subscription games that support local multiplayer. For example, a game like Torchlight II or Mario Party will allow you to play with friends who bring your Switches together without a Nintendo Online subscription or, of course, an Internet connection. So you have everything you currently get as part of Nintendo Online Subscription. Of course, whether these features are worth the money depends entirely on how much you value them. We expect nintendo will sweeten the deal over time, but since it's Nintendo we're talking about it's not telling you when and how. Does Nintendo Switch Online Service Worth It? Okay, so let's sum up the value proposition here and figure out if this service is for you. If you want to play games online that require a subscription, this is a no-brainer. You should go to the service and have a blast with friends who are too far away for local multiplayer. If you're a retro-game lover and have the titles you want to play in the NES and SNES collection, then the \$20 per year portable classic game collection is a steal. So that alone is definitely a reason to pay the fee. If you are going to buy two or more games from the coupon list in a given year, then the money you will save is already paid for a year of individual membership, effectively making it free. So, this is also a good scenario and most of us are going to buy two AAA year of the games from that list. In this case, it is free money. Cloud saves are another killer feature, but it's not quite enough in itself to make the service worth it, but if you value your save games at over \$20 a year, then by all means pull the trigger. In general, Nintendo Switch Online service subscriptions are worth the money for most users and you should at least give the week-long trial a go before releasing it completely. Completely.
